<td>Action Tool Title</td>
<td>Form-Based Codes</td>
</tr>
</tbody>
</table>

### Description of the tool:
Form-based Codes are an alternative to traditional zoning. They foster predictable built results and a high quality public realm by using physical form (rather than separation of uses) as the organizing principle of this code. These codes are adopted into city or county law as regulations, not mere guidelines.

### How Well Does It Work?

### How valuable is this tool? How important is its contribution to achieving North Texas' vision for the future?
Form-based Codes encourage creative projects, live/work environments and walkable neighborhoods. They also increase work-force housing and the development of traditional neighborhoods while decreasing the necessity for driving and long commutes. The Connected Centers and Diverse, Distinct Communities scenarios, both of which easily lend themselves to Form-based code type of planning and development, are important because the NCTCOG projections estimate that they will reduce Vehicle Miles Traveled by up to 10.8% compared to the Business as Usual (BAU) scenario.

### How does it actually work?
By adopting form-based codes, governments allow for both creativity and predictability in planning. They also encourage diverse uses, greater density and walkable neighborhoods.

### What are the costs and who will they affect?
The initial costs are administrative.

- NCTCOG projects savings of 4.9 to 6.5 billion dollars on road infrastructure (See the Transportation System Benefits table on page 4 of the Transportation report).

### What are the benefits and who will they help?
NCTCOG projects reduced delays by up to 18.7% VS BAU.

- Estimates for reduced pollution vary from 6.6% to 11.4%, depending on the scenario and pollutant, compared to BAU.

### What are the biggest stumbling blocks?
Form based codes may require additional staff time for review and administration.

### How can they be addressed?
Additional education and training for municipal staff.
